MEMORANDUM FOR THE RECORD

SUBJECT: Automatic Aircrewman Survival System Developed by Vought Missiles and Space Company

1. The December 1971 issue of Naval Aviation News had an article on tests being conducted on a new Emergency Abandonment System. This system is being developed by the Naval Air Development Center at Warminister, Pennsylvania. The manual/automatic system under test and development will enable pilots and aircrewmen to be released from the cockpit attachments simultaneously during an emergency. The same system gets rid of an ejectee's parachute and energizes his flotation equipment also instantaneously when he enters the water.

## Approved For Release 2003/08/21 : CIA-RDP75B00285Re00100220006-1 S E C R E T

- A. Personnel contacted:
- (1) Capt Nowers (OX 2-7548) Office in charge of Life Support.
  - (2) Mr. Harry Bartlett (OX 2-7433) Project Officer
  - (3) Location of Navy in Crystal City,

    JP-2 Rm 1054 (Next door to Holiday Inn)
- B. The system was discussed in detail with Mr. Bartlett. (See Attachment 1 and 2.) It looks like a very promising system; however, it is not as far along as the Naval Aviation News led us to believe. At present time they are at a standstill for funds. It looks like two or three years before the system will be completed. The tests will cost approximately \$250,000 and the Navy only has \$150,000.
- 4. Periodic followups will be made with the Navy on tests and development of their system.
